The Skin Rejuvenation Sensation

Cosmedico
COLLAGEN
Pro Beauty

5 beautiful reasons for Cosmedico COLLAGEN Pro Beauty in the salon:

- Additional beauty treatment offer for tanners
- Allows skin rejuvenation in unused sunbeds
- Just change lamp and stock up on collagen
- Suitable for most devices
- Win new target groups

With the **Cosmedico COLLAGEN Pro Beauty** lamps, skin rejuvenation is no longer a dream. Research proves that the natural production of collagen can be stimulated with red light.

Cosmedico COLLAGEN Pro Beauty tubes emit soft red light of exactly the right wavelength range and deliver exactly the kind of red radiation that encourages the collagen regeneration and activates the skin rejuvenation.

Benefits:

- Visible anti-aging effect
- Reduction of lines, especially eyes zone, neckline, area around mouth and lips
- Improvement of skin elasticity, suppleness and firmness
- Renewal of collagen and elastin fibres
- Activation of the skin's metabolism
- Promotion of a healthy skin
- No negative side effects or harm
- No pain

The Rejuvenation Effect of Cosmedico COLLAGEN Pro Beauty

The aging process goes along with two essential factors: The older the skin becomes, the slower the metabolism in the skin. This leads to a decrease of cell energy in the fibroblast cells, that produce collagen and elastin. Moreover, the body's capacity to produce the necessary nutrients for the fibroblast cells also declines.

The result is a reduced collagen and elastin production which shows in lines and an uneven and loose appearance of the skin.

The gentle red light waves of **Cosmedico COLLAGEN Pro Beauty** lamps stimulate the skin to start producing skin-tautening collagen and elastin fibres in the deeper layers of the dermis again. This photo bio stimulation has a visible smoothing effect on lines and activates the metabolism of the skin.

The result is a tight and firm skin with reduced lines, a fresh appearance and a smooth and beautifully radiant look.

Application

For a visible anti-ageing effect, treatments for a period of 4-12 weeks are recommended. However, frequency and duration of the treatments are to be matched to the individual needs of each customer. We recommend treatment to be carried out by qualified skin specialists (e.g. beauticians, dermatologists) who can adapt the treatment to the individual skin condition and ensure best results. Use of a hyaluronic acid cream in combination with the treatment can support the anti-ageing effect. Keep eyes shut during the treatment. Protecting goggles are not necessary

The Collagen therapy with **Cosmedico COLLAGEN Pro Beauty** does not use laser. The visible red light is warm, not hot, and activates the natural process of photo bio stimulation. There is no harm at all during the treatment and the red light can be applied to any skin type of any age, male or female.

The **Cosmedico COLLAGEN Pro Beauty** lamps fit in existing sunbeds just as well as UV lamps, allowing to turn the tanning bed into a light therapy bed.
